

Barb Jamicich

**Controls Estimator
Shambaugh & Son**

Value Delivered

As the Controls Estimator for the Process Controls Engineering Group, Barb enjoys estimating projects in the food and dairy industries, as well as those in the manufacturing sector. Each estimate presents new and different challenges for Barb, and she is committed to remaining knowledgeable in the latest technology. Barb readily works with customers, suppliers, and Shambaugh engineers to help produce the most appropriate controls solutions.

Expertise

Barb has enjoyed projects in several industries, gaining a variety of experience:

- Electrical Project Engineer for a Chicago operating area: Estimating, project management, programmable logic controller (PLC) programming, automation, monitoring, and remote control of pumping stations and tank farms.
- Electrical and mechanical maintenance: Developing preventative maintenance schedules, maintenance, and projects for a crude pipeline and storage facility.
- Electrical, controls, and PLC projects as a subcontractor for a food and dairy company.
- Engineering assistant, accounting, and administration for automating smelting furnaces, forgings, stress rupture, tinsel test, and spectrometer applications.

Barb graduated from Valparaiso University with a Bachelor of Science in electrical engineering.

The Personal Side

Barb is married with three children. She enjoys attending her children's activities, which include marching band competitions, football games, and track meets. She also enjoys reading, walking, volunteering, and visiting family at a lake in northern Wisconsin.
